

# Finite Elements in Structural Analysis

An Introduction to Finite Element Method  
 Prof. Dr.-Ing. Horst Warkle, Allensbach, Germany

## Syllabus

Lecture	Title	Book Pages	Content	Slides	Presentation
1	1. Introduction	192	Introduction, Application of FEM in engineering, History of FEM	1 - 20	FEA_1_0
2	2 Truss and beam structures	77 - 91	Direct stiffness method (overview), stiffness matrix of a truss element	1 - 30	FEA_2_1
3		92 - 106	Global stiffness matrix, introductory example, practical conclusions	31-52	FEA_2_1
4		107 - 124	Springs, stiffness matrix of beam elements	1 - 34	FEA_2_2
5		124 - 139	Hinges, example (beam structure), 3D beam elements	1 - 30	FEA_2_3
6	3 Modeling of truss and beam structures	145 - 175	Modeling of beam structures	1 - 40	FEA_2_4
7		-	Exercise 1		
8	4 Plates, shells and 3D solids	193 - 205	Approximative character of FEM, One-dimensional introductory example: tapered truss element	1 - 23	FEA_3_1
9		205 - 217	One-dimensional introductory example (continuation), Properties of FEA; plates (Th. of elasticity I)	24 - 40	FEA_3_1
		47 - 59		1 - 18	THELAS_1
10		217 - 242	Stiffness matrix of a rectangular plane stress element, example (deep beam)	1 - 48	FEA_3_2
11		243 - 265	Element types (FE properties, isoparametric elements, nonconforming elements, hybrid elements)	1 - 30	FEA_3_3
12		-	Exercise 2		
13		59 - 69	Plates in bending, shells, 3D solids	1 - 26	THELAS_2
		278 - 280, 284, 293ff		1 - 16	FEA_3_4
14	5 Modeling	350 - 409, 505 - 510	Modeling of plates in plane stress and bending	1 - 59	FEA_4_0
15		-	Exercise 3
